

$$\frac{9}{10} \times 5 = \frac{9}{10} + \frac{9}{10} + \frac{9}{10} + \frac{9}{10} + \frac{9}{10}$$

$$= \frac{9 \times 5}{10} = \frac{45}{10} = \frac{9}{2} = 4\frac{1}{2}$$

처음부터 약분하여 계산할 수도 있습니다. $\frac{9}{\cancel{10}^2} \times \cancel{5}^1 = \frac{45}{10} = \frac{9}{2} = 4\frac{1}{2}$

$$\frac{1}{10} \times 8$$

$$\frac{1}{10} \times 12$$

$$\frac{3}{10} \times 3$$

$$\frac{3}{10} \times 6$$

$$\frac{7}{10} \times 5$$

$$\frac{9}{10} \times 4$$

$$\frac{1}{12} \times 9$$

$$\frac{1}{12} \times 16$$

$$\frac{5}{12} \times 8$$

$$\frac{2}{15} \times 6$$

정답
