

처음부터 약분하여 계산할 수도 있습니다. $2 \times 1\frac{1}{4} = \cancel{2}^1 \times \frac{5}{\cancel{4}_2} = \frac{5}{2} = 2\frac{1}{2}$

$$2 \times 1\frac{3}{4}$$

$$2 \times 1\frac{1}{3}$$

$$2 \times 1\frac{2}{3}$$

$$2 \times 3\frac{3}{4}$$

$$2 \times 2\frac{1}{4}$$

$$2 \times 3\frac{1}{4}$$

$$2 \times 1\frac{1}{6}$$

$$2 \times 2\frac{5}{6}$$

$$5 \times 1\frac{1}{6}$$

$$5 \times 2\frac{5}{6}$$
